

MICRO-FLUIDIZATION PRODUCTS FOR INDUSTRY

CHAIN APPLICATIONS

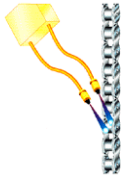

Messy and excessive chain lubricant applied by hand or other expensive outdated methods are the old way to lubricate chain. The uni-MAX process is the right way!

uni-MAX low maintenance equipment will apply timed precise amounts of AL 1000 lubricant as required to reduce wear and down time. This equipment can be used for high speed and other conveyor or power transmission chains.

System Operation

Using a series of uni-MAX "building blocks", UNIST will specify a system to meet your chain lubrication needs. The UNIST system will apply almost any lubricant with the frequency and volume necessary to assure proper lubrication, without over-lubrication and mess.

UNIST will assist you with nozzle selection, possible magnetic bases, hose length, lockable enclosures, reservoirs and on-off controls. Just FAX us your completed questionnaire from the reverse side.

Features and Benefits of Coolubing with uni-MAX equipment.

Coolube 2210 Lubricant

- Minute usage
- Biodegradable
- Non-toxic
- Consumed in operation
- Clean
- No disposal
- No recycling
- No mess
- Limited cleaning

UNIST System

- Steel enclosure
- Intermittent or continuous output
- 10 oz. to 30 gal. reservoirs
- Unlimited nozzles per system
- Easy adjustment
- Viton seals standard
